

Caller Dial Playbook

How to work the realtor call list — the pools you save once, the filter recipes you apply on the fly, and the daily loop. Every dial auto-counts, so the list re-sorts itself for you.

The model — don't make a smart list for every combination

Save only a few stable pools (below). For every other slice, apply a filter recipe on the fly: filter, dial, don't save. That keeps you to ~4 smart lists instead of 40.

YOUR FILTER BUILDING BLOCKS

Tags: region-charlotte / region-eastern-nc · phone-cell / phone-office · realtor-interested / realtor-callback / realtor-not-now / realtor-dnc · call-today. Number fields (auto-counted by your Call Counter workflows): Call Attempts · Connected Calls. Owner: which caller a contact is assigned to.

THE CALL-LIST TYPES (apply inside a pool — these are recipes, not saved lists)

List type	Apply these filters	Use it for	Tag after the call
Fresh / never called	Call Attempts is empty	Day-one first dials	interested / callback / not-now / dnc
Round 2 (called once)	Call Attempts is 1 — and NOT interested / callback / dnc	Second touch	re-tag the outcome
Round 3 (called twice)	Call Attempts is 2 — and NOT interested / callback / dnc	Third touch	re-tag the outcome
Warm — reached, undecided	Connected Calls is 1+ — and NOT interested / callback / dnc	People you actually talked to	push for the email
Today's callbacks	tag realtor-callback (+ call-today)	Scheduled commitments	clear or re-tag
Front-desk pool	phone-office + Call Attempts is empty	"Can I reach [agent]?"	re-tag the outcome
Exhausted / dead	Call Attempts is 4+ — and Connected Calls is 0	Stop dialing, move to email	realtor-not-now

» Focus any recipe by market: add the tag region-charlotte or region-eastern-nc.

SAVE ONLY THESE POOLS

Agents — Cells	phone-cell (~10,375)
Agents — Office	phone-office (~6,800)
Agents — Callbacks	realtor-callback
Agents — Interested	realtor-interested

THE DAILY LOOP

1. Open a pool (e.g. Agents — Cells).
2. Apply the day's recipe (e.g. + region-charlotte + Call Attempts is empty).
3. Dial top-down; drop the disposition tag after every call.
4. Call Attempts ticks up automatically, so tomorrow the same recipe surfaces the next round.

Running more than one caller

Bulk-assign a chunk of contacts to each rep with the Owner field, then add "+ Owner is [that rep]" to every recipe — so two callers never dial the same agent. Cleanest split is by market: Rep A = Charlotte, Rep B = Eastern NC.

DISPOSITION TAGS — apply exactly one after every call

realtor-interested

Wants the info. Auto-emails them the one-pager + Report links. These are your conversions.

realtor-callback

Asked you to call back. Add call-today if it's for today. Surfaces in the Callbacks pool.

realtor-not-now

No fit right now, or no answer after enough tries. Rests them out of the active rounds.

realtor-dnc

Do not call. Drops them from every dial queue permanently. Use sparingly.
