

# CRM Cheat Sheet

Tag every call. Watch the scoreboards. The whole calling system on one page - realtors, wholesalers, and investors all run the same way.

## AFTER EVERY CALL - DROP EXACTLY ONE DISPOSITION TAG

| Outcome     | Tag                                | What it does                                                                                                               |
|-------------|------------------------------------|----------------------------------------------------------------------------------------------------------------------------|
| Interested  | [audience]-interested              | Auto-sends the product email (one-pager + free tool) AND drops a deal card on the Sales board. These are your conversions. |
| Callback    | [audience]-callback (+ call-today) | Lands them in that audience's Callbacks list to re-dial. Add call-today for a same-day promise.                            |
| Not now     | [audience]-not-now                 | No fit right now, or no answer after enough tries. Rests them out of the active rounds.                                    |
| Do not call | [audience]-dnc                     | Drops them from every dial queue permanently. Use sparingly.                                                               |

[audience] = realtor · wholesaler · investor. Same four outcomes for each - only the prefix changes. e.g. realtor-interested, wholesaler-callback, investor-dnc. Tagging "interested" is the only one that triggers automation; the rest just sort the lists.

## THE 5 SCOREBOARDS - WHERE TO LOOK

| Scoreboard                   | Where                                      | What it shows                                                                                                                    |
|------------------------------|--------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| Call volume                  | Reporting > Call Reporting (filter: Today) | Dials, connects, talk time. Automatic - you dial inside GHL.                                                                     |
| Today - Interested (Session) | Opportunities board -> saved tab           | Every interested lead created today - all 3 audiences. Tell apart by card name "- Realtor / Wholesaler / Investor (Interested)". |
| Today - Callbacks            | Contacts -> saved tab                      | Your realtor callback queue (tag: realtor-callback).                                                                             |
| Wholesaler - Callbacks       | Contacts -> saved tab                      | Your wholesaler callback queue (tag: wholesaler-callback).                                                                       |
| Investor - Callbacks         | Contacts -> saved tab                      | Your investor callback queue (tag: investor-callback).                                                                           |

### What fires on "interested"

The product email (one-pager + the free tool at [southerncitiesconstruction.com/agents](https://southerncitiesconstruction.com/agents)) sends automatically, and a deal card lands on the Sales board at Qualified. Hands-free - you just tag it.

### Keep callback lists clean

After you complete a callback, re-tag the new outcome. Removing the -callback tag drops them off automatically, so each list always equals "callbacks I still owe."

### The daily loop

Open a pool, dial top-down, tag every outcome. Call counts re-sort the lists for tomorrow. At the end, glance at the scoreboards for your numbers.
