

CRM Structure Blueprint

Stop running the funnel as smart lists. Stage belongs in a Pipeline; smart lists are for audiences + work queues; everything else is a filter. Here's the model and the migration for your current 13 lists.

THE MODEL — FOUR LAYERS, EACH WITH ONE JOB

Layer	Tool	What it holds
WHERE in the journey	Pipeline (Opportunities)	The stage. Drag cards New to Won; get conversion rates + velocity for free.
WHO they are	Smart Lists	Audience/persona + a few active work queues. Keep this set small and stable.
Situational slice	On-the-fly filters	Call count, geo, phone type, date. Filter, dial, don't save.
Attributes	Tags	region-*, phone-cell/office, dispositions (interested, callback, dnc).

YOUR NEW SALES PIPELINE

Replaces the numbered 1–6 smart lists. Built in Opportunities -> Pipelines.

1 · New Lead	Imported or opted in — not yet worked.
2 · Contacted	First call / touch logged; in follow-up.
3 · Qualified	Confirmed fit + interest (a real deal, or realtor-interested).
4 · Proposal Out	Report quote / Deal Pack / offer sent.
5 · Closing	Verbal yes, negotiating, or awaiting payment.
6 · Won	Paid or under contract.
Lost	DNC / no-fit / dead (closed-lost — keeps Won % honest).

YOUR 13 LISTS — KEEP / MERGE / RETIRE

- RETIRE — these become pipeline stages**
1. New Leads · 2. Contacted · 3. Qualified · 4. Proposal Out · 5. Closing · 6. Won
- KEEP — these are real audiences**
Aud: Wholesalers · Aud: Agents · Aud: New / Learning
- MERGE — into one Aud: Investors**
Aud: Fix & Flip + Aud: Buy & Hold -> Aud: Investors, with a strategy tag (fix-flip / buy-hold) so you can still split them.
- RENAME — it's a work queue**
Agents - CLT . Cells -> Queue: Agents — CLT Cells

Migration order

1. Build the pipeline: Opportunities -> Pipelines -> "Sales Pipeline" with the 7 stages above.
2. Seed it: bulk-add contacts from each numbered list into its matching stage, then add a workflow that creates a "New Lead" opportunity for every new contact.
3. Wire the moves: dispositions advance cards — realtor-interested -> Qualified, payment -> Won, realtor-dnc -> Lost.
4. Once the pipeline mirrors them, delete the six numbered smart lists. Merge the two investor audiences; rename the queue.

Naming convention going forward — Aud: who they are (audience) · **Queue:** an active list a rep dials or tasks · **Pipeline** owns the stage (never duplicate it as a list) · **Tags** hold attributes + dispositions.

WHAT THIS UNLOCKS

Real funnel numbers

Conversion % and stage velocity per audience — automatically, instead of counting tags by hand.

One source of truth

A contact's stage lives only in the pipeline. No more keeping tags, lists, and stages in sync by hand.

Scales with hires

Reps work a Queue, you watch the Pipeline — nobody dials the same lead twice, and onboarding is one playbook.
