

FOR NC WHOLESALERS READY TO LEVEL UP · 2026

From \$10K to \$104K in 9 Months

The NC wholesaler-to-flipper transformation — how one Charlotte wholesaler stopped giving away his best deals and started keeping them, using a licensed GC's execution stack instead of learning construction himself.

THE WHOLESALE CEILING

Even \$40K assignments have a hard ceiling. Here's where it sits.

If you've leveled up to \$25–40K assignments, you've already done the hard work — you've fixed your buyer pool, you've stopped chaining deals to other wholesalers, you're attracting real investors with verified packages. Congrats.

Now look at what your buyers are doing on those same deals.

\$10K

PURE WHOLESALE · YEAR 1

\$25K

WITH DEAL PACK · YEAR 2

\$104K

WHOLESALE-TO-FLIP · YEAR 3

THE BRUTAL MATH

You assign a deal for \$30K. Your buyer closes it, executes the rehab with their own GC, sells it 90 days later for \$130K in flip profit. They made **4×** what you made on the property you found, negotiated, and contracted. Same deal. They just kept it.

The only reason most wholesalers don't keep their best deals is execution risk — they don't have a sub network, they don't have the GC license, they don't have the draw-schedule literacy, and they've heard too many flip-gone-wrong stories. So they assign and take the smaller, faster check.

But what if you could keep your best 2–3 deals per year — the ones with the cleanest spreads — and let a licensed NC GC handle the entire execution side? That's the path this playbook documents.

THE 9-MONTH PATH

What Marcus's transformation actually looked like

Marcus is a Charlotte NC wholesaler. End of 2025, he was a year and a half into Deal Pack usage, doing 8–10 deals a year at \$25–30K average assignment fees. Solid business. But every quarter he watched a buyer flip one of his deals for \$90–120K and felt the same gut punch.

In January 2026 he decided to keep one. Nine months later, he closed his first flip — **\$104K net profit** — using SCC's execution stack. He didn't pick up a hammer. He didn't learn construction. He underwrote the deal, approved the milestones, and signed the checks. SCC ran the build.

MONTH	PHASE	WHAT HAPPENED
MONTH 1	DISCOVERY	Marcus has a contract on a deal he'd normally assign. Instead, he books a CO1 Execution Review with SCC.
MONTH 2	DECISION	CO1 report comes back clean. Marcus pulls his hard-money loan, closes on the property, signs CO3 oversight agreement.
MONTHS 3–7	EXECUTION	SCC manages subs, draws, inspections, schedule. Marcus visits site twice. Total Marcus hours: ~20 across 5 months.
MONTH 8	LIST + SELL	Property hits MLS at top of comp band. Multiple offers within 14 days.
MONTH 9	CLOSE + COUNT	Closing day: \$104K net profit. Marcus keeps the relationship — books CO1 on his next deal.

MONTH 1 · DISCOVERY

Marcus stops the assignment habit and books a CO1 instead.

Marcus has a 1960s ranch under contract in southeast Charlotte. ARV \$385K. He's already gotten two assignment offers (\$28K and \$31K). The Deal Pack he ran shows a Tier 2 rehab budget of \$94K. His usual move: assign and pocket \$30K. Take the win.

This time he runs the other math. **\$385K ARV minus \$94K rehab minus \$185K acquisition minus \$28K holding/financing/sale costs = \$78–112K projected net.** Even at the conservative end, he'd net 2.5× his assignment fee — and he'd still own the GC relationship for next time.

WHAT HE DID

Booked a CO1 Execution Review with SCC. CO1 is a deep-walk of the property by a licensed NC GC with a written risk report — every execution risk that could blow the budget, every line item that needs sub validation, every lender-killer that could derail the project.

WHY THIS IS THE FIRST STEP

CO1 doesn't commit him to anything. It just tells him whether the deal he's been about to assign is actually the deal worth keeping. If CO1 surfaces \$25K+ of hidden risk, he assigns it as planned. If CO1 shows the deal is clean, he has the green light to close on it himself.

MONTH 2 · DECISION

CO1 comes back clean. Marcus commits.

The CO1 report flags one open permit from 2018 (close-out cost: \$325) and notes a soft soffit at the southwest corner (\$950 to repair). Otherwise: structurally clean, mechanicals at 60% useful life, foundation dry, no surprises.

Marcus pulls a hard-money loan through one of SCC's vetted lender intros — DSCR-style construction loan, 80% LTV, 10% holdback for rehab draws. Closes on the property 18 days later. Same day he signs SCC's CO3 (Active Project Oversight) agreement, scoped at the Standard tier for this project.

WHAT HE SIGNED UP FOR

CO3 Active Oversight: SCC manages weekly site walks, draw-release approvals, sub coordination, schedule defense, issue escalation, and final closeout. Marcus stays in his investor role. He never becomes the project manager. He approves milestones; SCC runs the build.

WHY HE DIDN'T GO FULL GC (CO5)

Marcus owns the property himself — that's the whole point. He wanted the profit upside of being the owner of record, the appraisal control of being the borrower, and the resale relationship of being the seller. CO3 lets him do all that while SCC owns the execution side.

MONTHS 3–7 · EXECUTION

SCC runs the build. Marcus runs his wholesale book.

This is the period where most wholesalers-turned-flippers get destroyed — managing subs, chasing draws, fighting schedule slippage, mediating change orders. Marcus skipped all of it.

METRIC	VALUE
Site visits Marcus made	2 (one demo walk, one before-paint walk)
Time Marcus spent on construction questions	~20 hours total across 5 months
Subs Marcus had to manage directly	0 — SCC handled all coordination
Draws Marcus approved	4 — all delivered to him in lender-ready format
Change orders that surprised him	0 — every change was reviewed + signed before work began
Wholesale deals Marcus did in parallel	3 (kept his pipeline running through Q2/Q3)
Wholesale assignment revenue during this window	\$78K (avg \$26K × 3 deals)

THE INSIGHT

Marcus didn't trade his wholesale business for a flip business. He **ran both in parallel**. His wholesale book funded his life through the rehab period. The flip was the upside, not the bet.

MONTHS 8-9 · LIST + CLOSE

The flip closes. The math lands.

Property hit MLS at \$389K on the strength of mid-market finishes, lender-friendly mechanicals, and a clean inspection package. Multiple offers within two weeks. Sold \$394K — slightly above list. Here's the full P&L.;

LINE ITEM	AMOUNT
Sale price	\$394,000
Acquisition cost	(\$185,000)
Hard money loan interest + points (9 months)	(\$12,400)
Rehab budget (verified, Tier 2)	(\$94,000)
CO1 fee	(\$499)
CO3 Standard tier oversight (full project)	(\$12,500)
Holding costs (taxes, insurance, utilities)	(\$4,800)
Listing agent commission (3%)	(\$11,820)
Buyer agent commission (3%)	(\$11,820)
Closing costs + transfer	(\$2,600)
Contingency used (sub overrun on plumbing)	(\$3,800)
NET PROFIT	\$104,761

THE COMPARISON

Had Marcus assigned this same deal for \$30K: he'd be \$30K richer, full stop. By keeping it and using SCC's execution stack: he netted \$104,761 — **\$74,761 more** than the assignment path. All while running his wholesale business in parallel.

THE HONEST MATH

What this requires from you — and what it doesn't

Not every wholesaler is ready for this path. Here's the honest scorecard:

WHAT YOU NEED	REALITY
Capital required	\$25K–\$60K cash (down payment + reserves). The rest is leveraged via construction loan.
Credit profile	650+ for hard money / DSCR construction. Or partner with someone who has it.
Time commitment per project	~20 hours total across 9 months. Not a full-time job. Less than half your existing wholesale workload.
Construction expertise needed	Zero. SCC owns the construction side end-to-end.
Risk you carry	Market risk, holding-cost risk, sale-timing risk. Same risks as your buyer carries today — but now you keep the upside.
Risk SCC carries	Execution risk. Budget overruns. Sub performance. Schedule integrity. That's our job, our license, our reputation.

WHO THIS IS NOT FOR

Wholesalers under \$20K avg assignment fees should stay on the Deal Pack track first — get to \$25–40K assignments consistently before you start keeping deals. The first flip should NOT be your Hail Mary.

HOW SCC RUNS THE EXECUTION

What we actually do across CO1 → CO3 → CO4

There are three products that power the wholesale-to-flipper conversion. You don't need all three — you pick the level of involvement based on the deal and your comfort.

PRODUCT	WHAT IT DOES
CO1 · INVESTOR EXECUTION REVIEW	60-min deal walkthrough by a licensed NC GC. Written risk report. Recommended downstream path. The cheapest possible green-light decision before you commit to keeping a deal.
CO3 · ACTIVE PROJECT OVERSIGHT	Weekly site walks, draw releases, sub management, schedule defense, issue escalation in writing, final punch-list closeout. You stay GC-of-record (or co-record); we run the project.
CO4 · GC-SUPPORTED OWNER BUILD	Owner-builder structure with SCC standing behind the license-level risk. You're the GC of record on paper; we're the inspector-facing accountability.

Marcus used CO1 + CO3. That's the most common path for first-time wholesale-to-flippers. Once he has 3+ projects under his belt, he'll likely move to CO4 to capture more margin while still letting SCC carry the license-level risk.

THE DECISION FRAMEWORK

Which deals to keep · which deals to assign

Not every wholesale deal should become a flip. Most shouldn't. Here are the five filters Marcus now runs on every contract before he decides whether to assign or keep:

1. SPREAD AT LEAST 3× ASSIGNMENT FEE

Projected net flip profit must be $\geq 3\times$ what you'd capture by assigning. If your typical assignment is \$30K, you only keep deals with \$90K+ projected net. Below that, the risk premium isn't worth it.

2. CO1 CLEAN OR LIGHT-RISK

If CO1 surfaces more than 1 medium-severity execution risk per \$50K of budget, assign the deal. Clean diagnoses are the only ones worth keeping.

3. MARKET-COMPATIBLE EXIT

ARV based on at least 3 recent comps within 0.5 miles, sold in last 6 months, comparable beds/baths/sqft. No speculative exits.

4. CAPITAL + RESERVES IN PLACE

Down payment + 6 months of holding costs in cash before you commit. Never deploy your last dollar on a flip.

5. EXIT TIMELINE FITS THE SEASON

NC selling season is March–October. If your projected completion is November or later, assign and re-deploy capital in Q1.

YOUR NEXT 9 MONTHS

Three doors. Pick one.

DOOR 1 · CO1 INVESTOR EXECUTION REVIEW · \$499

If you have a deal you've been thinking about keeping instead of assigning, this is the starting line. A licensed NC GC walks the deal, delivers a written execution risk report within 7 days, and tells you whether the deal is keep-worthy. Refund if we cannot produce the report. **Book at southerncitiesconstruction.com/platform.**

DOOR 2 · BUILD DESK MEMBERSHIP · \$97/MO STARTER

Not ready for a specific deal yet, but want a licensed NC GC on retainer for your portfolio decisions? Build Desk gives you 2 reviews per month, project intelligence reports on any active build, vetted sub directory, and member-rate CO1 pricing. **Apply at southerncitiesconstruction.com/build-desk.**

DOOR 3 · BOOK A 30-MIN CALL WITH DARIUS

Want to talk it through before you commit to anything? Book a 30-minute strategy call directly with the founder. Free for serious NC wholesalers. Limited to 8 calls per week. **Book at southerncitiesconstruction.com/strategy-call.**

2026 capacity is capped. First 10 wholesale-to-flipper conversions get founder oversight.

We're accepting 10 wholesale-to-flipper conversion clients in 2026 with direct founder involvement (Darius personally on every CO1 + weekly check-ins through Month 9). After that, conversion clients are routed to our senior PM. Book your CO1 to claim a founder-oversight spot.

WHY YOU SHOULD TRUST THIS

I lost over \$100K being on the wrong side of this exact transition.

I'm Darius T. Walton. I'm a licensed NC General Contractor (License #107724) and the founder of Southern Cities Construction. I built this entire platform — CO1 through CO5, Deal Pack, Build Desk — because I lost over \$100K on my own real estate investing deals when I first got into the industry 8 years ago.

Specifically: I tried to do what Marcus did, but without a GC license, without a vetted sub network, without draw-schedule literacy, without the execution stack that SCC now provides. I got destroyed on three projects in a row before I got my license and figured out the actual playbook.

The reason I built CO1, CO3, CO4, and Build Desk is because I knew the moment I had a license and a working sub network, there were hundreds of NC wholesalers in the exact spot I was in 8 years ago — ready to keep their best deals, but missing the execution muscle. That's the entire purpose of this platform: be the execution muscle for people who already have the deal flow.

Most GCs won't review a deal you don't own yet. We will. Most GCs won't co-pilot your first flip. We will. That's the wedge — and it's the entire reason a wholesaler-to-flipper conversion takes 9 months with SCC instead of 3 years on your own.

Book your CO1 Execution Review today

The fastest path from this PDF to your first \$100K flip starts with a \$499 CO1. Refund if we cannot produce the written report. Book at southerncitiesconstruction.com/platform.
