

SOUTHERN CITIES CONSTRUCTION

HOW WE KNOW WHAT'S REALLY WRONG — the diagnosis ladder · NC GC #107724

An inspection shows symptoms, not causes. A ceiling stain could be roof, flashing, plumbing, or condensation — same symptom, four different repair bills. Because we **commit to the price**, we climb only as far up this ladder as the risk demands — then hold the number honestly.

1 HYPOTHESIS

GC Quick Read · \$299

GC reads your report / photos — flags + rough ranges.

Opinion, not verified.

2 DOCUMENTED

Inspection + GC Read · ~\$599

Licensed inspector on-site — symptoms documented + GC's read.

Visual only — symptoms, not causes.

3 DIAGNOSED

Diagnosis · scoped

Targeted diagnostics find the true source on the big-swing items.

Sewer scope · moisture/thermal · engineer eval · inspection port.

4 FIRM & FIXED

Inspection + GC Budget Report · \$899 → we fix it

Root-cause scope + a firm number, then we do the work.

Held by allowances + concealed-condition terms.

◆ **HOW THE PRICE HOLDS** so the commitment isn't a guess: **Assumptions & exclusions** stated up front · **Allowances** for unknown-scope items (reconciled to actual) · **Concealed-conditions clause** — open-and-find that wasn't reasonably visible = a defined change order, not your loss · Diagnostics only where the cause is uncertain *and* the cost swing is big.
